

Lille Røde Tech Specs and Rider

Anna Mountford - 07976 391234

Technical Requirements

Anna runs a small self sufficient rig consisting of a Soundcraft UI16 mixer, wireless IEM's, a midi keyboard controller and lap top to run and mix everything live. If there is no in house PA Anna can also provide 2 x 1000 Watt peak power full range active speakers and is then completely self sufficient.

If there is a FOH board, the signal can be split so that vocals and music are sent out on separate channels for FOH mixing using a 10 meter XLR splitter cable which can either patch into the venues DI box or straight into the FOH board.

Anna plays with a click track, her IEM's plug into her own mixer so she can set the levels for on stage monitoring herself.

The feeds sent to FOH will be dry.

Anna uses her own mic and stands and a TC Helicon foot peddle.

Venue to supply:

Assistance patching to venue's FOH system

Rider

Private, clean room to change and rest

Toilets with Mirror

STILL water

Hot drinks or facilities to make them

Healthy snacks and fruit, crisps etc

Wifi
